

MAFA Micro, Mini och Midi

- storage hoppers for wood pellets

MAFA Pellets hoppers with adjustable auger inlet

- Attractive price
- Self-emptying
- Convenient handling
- High safety

MAFA Micro, Mini and Midi are neat, durable and practical containers for the storage of wood pellets. They are designed for indoor use and intended for consumers that use bulk or bagged pellets.

A consumption of 3 m³ of oil would require 6 tons of pellets per year.

- This means 375 pieces of 16 kg bags/year.
- A 300 liters Mini hopper would need to be filled 31 times per year.
- A 730 liters Midi hopper would only need to be filled 13 times per year

MAFA Micro, Mini and Midi can be used as intermediate storage for bulk deliveries. They can be fitted with a lid and a sensor and are refilled automatically from the primary silo with either a vacuum system, or a traditional Maflex auger. Micro, Mini and Midi are manufactured in durable galvanized plate and are provided with a 45° cone which ensures efficient and complete emptying. Standard features include an internal grid that functions both as protection and support when filling with bagged pellets, and a 100 mm adjustable auger inlet which is easily adjusted to fit the different types of wood pellet augers available in today's market.

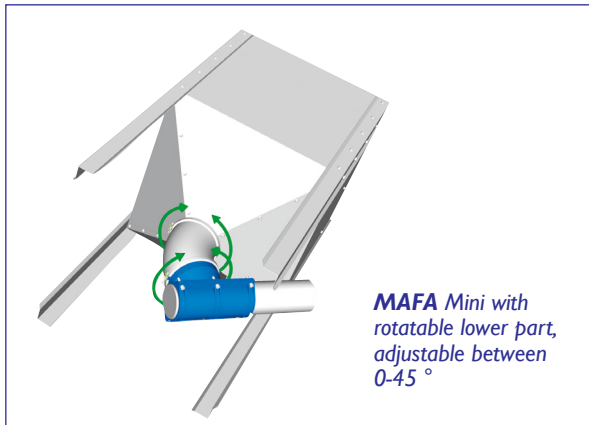

MAFA Mini holds 300 liters + possibly 200 liters = 500 liters with extension section.

MAFA Micro is the smallest model, holds 127 liters.

MAFA Midi is the largest model, holds 730 liters.

Technical data:	Micro	Mini	Midi
Art No.	2825	2810 2	815
Height, mm	1250	1230	1422
Length, incl. legs, mm	430	650	1000
Width, incl. legs, mm	430	650	1000
Volume, litre	127	300	730
Weight, Kg	22	34	65
Accessories:	Art No.	Art No.	Art No.
Lid	3765	2847	2822
Lid with flange	2830	2845	2823
Extension		2811*	2635**

* For MAFA Mini: 550mm high, increases capacity by ca. 210 litres

**For MAFA Midi: 600mm high, increases capacity by ca. 520 litres

Examples of MAFA Mini as an intermediate storage

MAFA Micro, Mini and Midi can even be used as an intermediate storage with larger plants. They can be fitted with a lid and a sensor and are replenished automatically from the primary hopper.

Example of a **MAFA Mini** used as an intermediate storage in a larger plant, combined with a **MAFA Maflex** flexible transport auger to transfer the pellets to the burner.

MAFA Mini used as an intermediate storage together with a **MAFA** feeding auger.

Another example of a **MAFA Mini** being used as an intermediate storage with a larger plant. This **MAFA Mini** has leg extensions and a Y-pipe with two **MAFA Maflex** flexible transport augers transferring the pellets to two burners.
