

MAFA UNS 3

AGRICULTURE

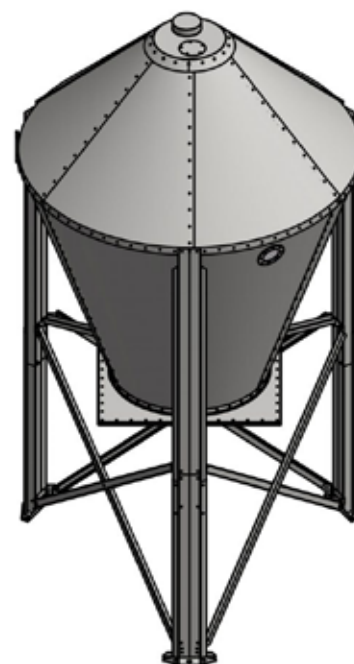

MAFA UNS 3 is a Swedish-made silo intended to be placed indoors. The silo has a stable construction and is made of high-quality sheet steel, coated with aluminium and zinc. A quality sheet with longer durability compared to, for example, galvanized sheet. It is designed to function as an intermediate storage and is therefore not equipped with a cyclone and filling pipes. Instead, the silo has a top plate with 160 mm connection for filling.

The silo is developed according to our UNIK concept and fits with all emptying options in the UNIK price list. It is well suited for use as an intermediate storage of self-produced feed. This way problems with hanging and separation are avoided.

We provide a 10-year material warranty against rusting on our factory-fitted MAFA UNS 3. It is designed to handle loads of up to 750 kg / m³ as standard and can be adapted for higher volume weights.

Advantages of MAFA UNS 3:

- The surface coating reduces the heat radiation in the silo.
- Longer service life. We provide a 10-year material warranty against rusting.
- The feed slides easily with minimal friction as the inside is smooth, equipped with a special bolt and a steep cone.
- A wide range of auger boxes for gentle feed handling and different capacity requirements are available.
- Economical feed handling if combined with a MAFA UNIK Auger Box. The silo is emptied with the combination from the bottom, which gives minimal separation.

Technical information

Model	Volume - m ³	Height - m	Ton at 650 kg/m ³
MAFA UNS 3 70° cone, 45° roof, ø -1,89 m			
UNS-3	3,6	3,5	2,3

ACCESSORIES

All MAFA silos can be equipped with various accessories to optimize the functions for the specific customer.
